

'Keeping Horses Sound'

Information seminar at Laurel View, Equestrian Centre. 4th of February at 6pm

Presented by Dianne Jenkins JENT EBW PT2.

Equine Neurophysiologic Practitioner

Educational, practical 'hands-on' seminar. Learn to identify signs that indicate a horse is struggling, and that inevitably lead to lameness: conformation, gait evaluation, consideration of whether training and behavioural issues are pain related, the latest therapies that are successful in keeping horses sound.

Topics

Conformation assets for different disciplines

The effects of conformation faults on the body & performance plus training strategies to prevent early wear & tear.

Gait evaluation

Viewers are invited into the arena to observe horses moving, the landing and flight patterns which are the subtle first signs of deficits and joint pain.

Skeletal & Muscular Asymmetry

What the causes are, the implications of, and how to manage.

High Heel/Low Heel Syndrome

Uneven front hooves cause whole body effects. Why these horses break down earlier and the latest information available on what can be done about it.

Underperformance - Behavioural issues or pain

How to tell the difference. Palpation skills are taught.

Hooves, joints or soft tissue

How do you tell what is going on before you have to call the vet for a lameness problem

Demonstrations of successful management therapies:

Professional & owner administered.

This will be a very informative seminar. Don't miss it!

Seminar cost is £10 at the door - no pre-booking required
